METHODOLOGY

METHODOLOGY

The survey is conducted monthly in 29 countries around the world via the Ipsos Online Panel. The countries included are Argentina, Australia, Belgium, Brazil, Canada, Chile, Colombia, France, Great Britain, Germany, Hungary, India, Indonesia, Israel, Italy, Japan, Malaysia, Mexico, Netherlands, Peru, Poland, Singapore, South Africa, South Korea, Spain, Sweden, Türkiye and the United States of America.

For the results of the survey presented herein, an international sample of 20,570 adults aged 18-74 in Canada, Israel, Malaysia, South Africa, Türkiye and the United States, 20-74 in Indonesia and Thailand, 21-74 in Singapore, and 16-74 in all other nations were interviewed between December 22nd 2023 and January 5th 2024. Approximately 1000+ individuals participated on a country by country basis via the Ipsos Online Panel.

The precision of Ipsos online polls are calculated using a credibility interval with a poll of 1,000 accurate to +/- 3.1 percentage points and of 500 accurate to +/- 4.5 percentage points. For more information on the Ipsos use of credibility intervals, please visit the Ipsos website.

Weighting has been employed to balance demographics and ensure that the sample's composition reflects that of the adult population according to the most recent country census data.

A survey with an unweighted probability sample of this size would have an estimated margin of error of +/- 3.1 percentage points for a sample of 1,000 and an estimated margin of error of +/- 4.5 percentage points for a 500 sample 19 times out of 20.

In 17 of the 29 countries surveyed internet penetration is sufficiently high to think of the samples as representative of the wider population within the age ranges covered: Argentina, Australia, Belgium, Canada, France, Germany, Hungary, Israel, Italy, Japan, Netherlands, Poland, South Korea, Spain, Sweden, Great Britain and United States.

Brazil, Chile, Colombia, India, Indonesia, Malaysia, Mexico, Peru, Singapore, South Africa, Thailand and Türkiye have lower levels of internet penetration and so these samples should not be considered nationally representative, and instead be considered to represent a more affluent, connected population. These are still a vital social group to understand in these countries, representing an important and emerging middle class.
